

# Stubbo Solar

Renewable Energy from ACEN

November 2023 Update

Construction has commenced on site with around 180 people working each day on the project.

Some of the work that has been completed has been the earthworks for access roads, and pad construction for our site compound and offices.

Piling installation has begun with over 10% of the total 123,000 piles installed.

We have had deliveries of our solar panels to site, with over 300,00 of the 930,000 solar panels needed for the project, already being housed in our warehouse in Sydney.

Deliveries of solar components, such as piles, trackers, cables, and raw materials, such as water, sand and cement will continue throughout the coming months.

Work on the substation and switchyard foundations will soon commence and we anticipate that the perimeter fencing will be completed at the end of November.

## Investing in Gulgong

A Social Investment Program (SIP) has been established for the duration of construction of the Stubbo Solar project to support the Gulgong community.

Funding is available to not-for-profit organisations in Gulgong for projects, events or facility upgrades.

We have been proud to sponsor recent events such as the Henry Lawson Heritage Festival, the Gulgong Eisteddfod, Watershed Landcare's Green Day, and the Gulgong Arts Council.

If you, or someone you know, are part of a not-for-profit organisation and would like to apply for funding under the Stubbo Solar SIP, please contact the Community Engagement team at [info@stubbsolar.com.au](mailto:info@stubbsolar.com.au).

## Employing local

If you would like to be considered for opportunities on the Stubbo Solar project please contact:

## Helping Australia transition to a clean energy future

Stubbo Solar will help Australia transition to net zero carbon emissions, delivering low-cost renewable energy and jobs for the Central West region of New South Wales.

The project will generate enough renewable energy to power 185,000 average Australian homes per annum and contribute to Australia's domestic and international commitments of renewable energy development, including NSW's target of 50% renewable energy by 2030.

The project is expected to create about 400 construction jobs over a two-year period and up to ten long-term jobs over the life of the project.

It will also create business and contracting opportunities for local businesses and suppliers.
