

Narragamba Solar

Renewable Energy from ACEN

Project location

The Narragamba Solar project is a proposed 320-megawatt renewable energy project located 20 kilometres north of the historic mining town of Gulgong, in the Mid-Western Regional Council Local Government Area.

There are a range of social, environmental and economic factors that guide how the site was selected. These include;

- Located within the NSW Government's Central-West Orana Renewable Energy Zone (REZ), which the state government has designated for the development of renewable energy projects.
- Located within cleared agricultural land and sparse woodland
- Direct access to proposed REZ transmission infrastructure
