Renewable Energy from ACEN

Temporary Workers Accommodation Facility

To limit the use of short-stay and/tourist accommodation in the region, ACEN Australia is planning to build a temporary workers accommodation facility for the Valley of the Winds project.

The temporary workers accommodation facility will be located on the corner of Moorefield Road and Orana Road. This provides a central location to all clusters of the project, minimising impacts related to traffic and transport.

The facility will have capacity for 400 workers. The camp would be used during construction of the Valley of the Winds project. It would be decommissioned when the site is no longer required to house workers. After decommissioning, the temporary accommodation structures, will be assessed for re-purposing or dismantling based on environmental factors and community needs.
